FAIR – From Principles via Practices to Profits

By Ronald Cornet, Associate Professor at the Department of Medical Informatics, Amsterdam UMC

The FAIR Principles are well-established and highly cited. Fortunately, many efforts are undertaken to turn these principles into practices.
While these are being shaped, they bring possibilities but also challenges.
This lecture will provide a necessarily incomplete view on ongoing activities, and will present lessons learnt from various research projects.
This with the intent to establish the profits that are foreseen when FAIR data at scale becomes a reality.
