FAIR Metrics for Research Software

By Pedro Hernandez Serrano, Data Steward at the Faculty of Science and Engineering

Research Software is essential in the research lifecycle. As a result, Open Science frameworks have embraced the idea that Research Software can and should also be FAIR. This presentation reviews how the FAIR principles are technically applied to Research Software. We will explore preliminary tools for FAIR evaluation on Research Software from local initiatives (the FAIR extension) and national ones (NL eScience Center recommendations). Finally, we'll have a quick overview of the FAIR Software roadmap at UM.
