Data Stewardship Wizard: Selecting suitable FAIR practices early in a project

By Dr. Rob Hooft, Programme Manager Data Stewardship at the Dutch Techcentre for Life Sciences (DTLS)

Two burdens push against researchers nowadays: Research funders tell them they should try to make their data FAIR, and many funders and institutes require them to make Data Management Plans. The Data Stewardship Wizard (DSW) facilitates both and turns the combined burden into a benefit for the project. In this talk, you will hear how DSW can make you aware of FAIR data management solutions you would not otherwise have considered. You will see how this can lead to more FAIR data with less effort. A change that benefits your project as well as future re-users of your data.
